

Exploring Fabric Collage - A Fabric Collage Book DVD- Lesley Riley

DVD Review

The camera loves you!

I did watch it right to the end (pulling out fabrics and stuff while I watched). The bloopers were very funny and surprising too because you looked like such a natural in front of the camera. It must have taken hours to do.

The whole thing really was an aha! experience for me because I now understood much better about things like using fluid acrylics and especially the whole transfer thing.

I also think it was a good idea to put the supplies list at the end. At first I thought that was weird, but I think if I had seen you show all those supplies at the beginning I would have been intimidated.

I also liked the fact that it was very simple in the camera shots -- very easy to follow. Watching your process for choosing fabrics, colors, and adding elements here and there was also educational and a lot of fun. I found myself trying to guess which fabric you would use and where you were going to put something. Actually, I can't really think of anything I didn't like. I mean it. And you know me, I speak my mind!
